Skooties have launched on Indiegogo!

Crowdfunding for Skooties, the patent-pending roller skate wheel locker, has begun

Denver, CO: Skate Skooties, LLC and inventor and roller skater, Rachel Bogan, announce the start of crowd-funding for the patent-pending roller skate wheel locker, Skooties.

Skooties are a unique way of “locking” roller skate wheels, preventing rolling when a skater feels a surface is too uneven to skate safely. Instead of rolling, a skater can walk until they feel safe enough to roller skate again.

Ms. Bogan’s idea for Skooties came from her own experiences roller skating on various surfaces. Working with Adam Zimmer from Denver 3D Print Company, they collaborated on the design and prototyping. Now, the next step is to build a platform to bring Skooties to the roller skater market.

Skooties are crowdfunding on Indiegogo and have a target goal of \$55,000. This amount will backfill costs for research and development, provide infrastructure for mass production and distribution, and marketing. The campaign is from February 22 - April 7, 2023.

There are multiple crowdfunding backing levels and perks include items such as postcards, roller skate wheel bags, 3-way skate tools and pairs of Skooties.

“I am so thankful for your support, sharing your excitement with me online,” says Ms. Bogan. “Today,

it's time to celebrate and start CROWDFUNDING!”
